Chemiluminescence Immunoassay (CLIA) System

Outstanding Technology Power of Maglumi

Chemiluminescence Immunoassay (CLIA) System

CLIA uses two important technologies, one is labeling technology which determines reaction mode; and the other is separation technology which determines the sensitivity, accuracy and precision of the reagents.

Labeling Technology

Two types of labeling technologies are commonly used. One is enzyme label and the other is non-enzyme small molecule label. Enzyme label reagents are not so stable and are easily affected by the change of storage conditions. Maglumi system applies ABEI labels. ABEI is a non-enzyme small molecule with special molecular formula to enhance stability in acid and alkaline solution. As fast chemiluminescence, ABEI chemical reaction with sodium hydroxide (NaOH) and Hyperoxide (H_2O_2) finishes the process in 3 seconds.

Separation Technology

Maglumi uses Nano Magnetic Microbeads. As separation technology, it has been widely used in the field of CLIA. Compared with traditional separation technology, it has the following advantages:

- Shortening the reaction time by enlarging the reaction area of antigens and antibodies.
- Enhancing the sensitivity by better and faster capture of antigens and antibodies.
- Reducing inter or intra-assay discrepancies significantly by mixing the reagents thoroughly in a liquid separation platform.
- Enhancing the accuracy by absorbing antigens and antibodies through chemical reaction.

MAGLUMI 800

Chemiluminescence Immunoassay (CLIA) System

Reagent Feature	 Flash chemiluminescence label—ABEI, with high sensitivity and long stability. Nano magnetic micro beads separation, fast and efficient.
Major Performance	Throughput: up to 180 tests/hour
	 24 hours ready to use Time to first result: 17 minutes
	Time to hist result. 17 minutes
Modes of Operation	Random, Batch and STAT
Sample Loading	Up to 40 sample tubes
	 Continuous loading, STAT available
	 Barcode reader recognition or analyzer auto numbered
	LIS connection, auto read sample info
	 Refrigerated sample area with independent power supply
Reagent Loading Reagent Integral	9 reagents on board
	 Continuous loading
	RFID reading all info of reagent
	Refrigerated reagent area
	Ready-to-use, no pretreatment required
	Including calibrators
	RFID tag storing all info of reagent
	RFID tag with built-in master curve
	 2-point calibration to adjust master curve
	Calibration stability: Max 4 weeks
	Clat datastics
Other Features	Clot detection
	 Liquid level detection Auto and optional ratio for high sample dilution
	Constant 37°C incubation
	- Constant 37 C incubation
Operation System	Windows 7
	HP compatible (Dual-core CPU)
	Color touch screen
Interconnection	Bi-communication with LIS via ASTM protocol
Other Information	● Input: AC 110-230 V, 50/60 Hz, Max 630W
	 Dimension and weight: 120×72×56cm 73kg

Certified to ISO 9001:2008
